

Rainbow Text Exercise

I've provided you with an `<h1>` element which contains 7 individual spans (each holding a single letter).

- Please write some JavaScript to make them rainbow-colored!
- In `app.js` you'll find an array of color names called `colors`. It looks like: `['red', 'orange', 'yellow', 'green', 'blue', 'indigo', 'violet']`.
- **Your task is to select all spans, iterate over them, and assign them each one of the colors from the colors array.** The first span should be red, the second should be orange, etc. Your result should look like this:

RAINBOW
